

IFS & Platned

Your partner in energy transformation

Transform your operations with platned & ifs solutions for power generation and utilities

01

Navigating industry challenges

The power and energy sector is undergoing a period of significant change. Decarbonisation, regulatory shifts, the transition to greener energy, and the demand for greater grid resilience are reshaping how you operate. As you diversify into renewable energy and adapt to new business models, managing a complex asset portfolio, integrating diverse operations, and maintaining high service standards can become challenging.

At Platned, we understand these needs. As a trusted partner of IFS, we deliver the technology to help you stay ahead—whether you're managing traditional power generation or exploring new energy solutions.

02

Seamless integration with SAP—enhancing what you have

We understand the importance of your existing systems. That's why, as an IFS partner, Platned ensures that IFS solutions integrate smoothly with your SAP environment. This approach enhances your current capabilities with minimal customisation, allowing you to quickly realise value. You can adopt the latest in service and asset management technology without disrupting your existing operations.

03

IFS Cloud: a complete solution for your needs

Our partnership with IFS allows us to bring you IFS Cloud, a comprehensive suite designed to support every stage of your asset, project, and service lifecycle. It integrates Enterprise Asset Management (EAM), Field Service Management (FSM), Mobile Workforce Management (MWM), and Enterprise Resource Planning (ERP). This unified solution is tailored to the needs of the power generation and utilities sector, offering benefits such as:

- **Asset Lifecycle Management:** From development through to decommissioning, IFS helps you optimise asset performance, reduce maintenance costs, and make smarter decisions through AI-driven insights. You'll be able to manage risks more effectively and extend the lifespan of your assets.
- **Service Management:** Advanced scheduling and optimisation tools streamline your field service operations, giving technicians real-time access to crucial information. This leads to improved first-time fix rates, reduced travel times, and ultimately, better service for your customers.
- **Workforce Management:** The dynamic scheduling engine adapts to changes in real-time, using machine learning to enhance job planning accuracy. This means increased productivity from your mobile workforce—up to 15-20% more—and a 30% reduction in travel time.

04

How Platned & IFS can support your success

- **Maximise Asset Uptime & Efficiency:** Leverage IFS to optimise asset performance, extend lifespans with IoT and predictive maintenance, and keep your operations running smoothly.
- **Enhance Customer Engagement:** IFS's omni-channel service capabilities—such as chatbots, portals, and virtual assistants—help you deliver a seamless experience that keeps your customers satisfied.
- **Scale with Flexibility:** IFS Cloud allows you to scale efficiently, integrate new energy technologies, and manage complex projects with agility.
- **Stay Compliant:** IFS supports compliance with industry regulations and environmental standards, making it easier to meet legal and safety requirements.

05

Real success with IFS solutions

Many organisations have already seen the impact of IFS solutions:

- **EDF Renewables UK** has utilised IFS Cloud to support its growth in renewable energy, improving efficiency and control over operations.
- **Stockholm Exergi** integrated IFS solutions to unify its asset management and workforce processes, enhancing overall productivity.
- **SDIC Qinzhou Electric Power** streamlined its operations with IFS, achieving a 20% reduction in operational costs.

Let's drive your transformation together

At Platned, our goal is to support you through your journey in the evolving energy landscape. With IFS Cloud's robust capabilities, we'll help you drive digital transformation, improve operational efficiency, and achieve sustainable growth. Whether you're aiming to optimise asset management, streamline service operations, or integrate new technologies, we're here to ensure your success.
