

Platned Construction Business Planning Solution

Comprehensive Business Planning for the Construction Sector

Our construction business planning solution seamlessly integrates crucial planning components into a unified system, tailored to support the complex needs of the construction industry. Leveraging our deep expertise, we provide businesses with the tools to forecast, consolidate, and manage critical financial and operational data.

Integrated Modules for Holistic Planning

Our solution offers robust integration across various key modules, delivering a 360-degree view of business health:

- **Cash forecasting:** Ensure adequate cash flow and proactive financial management.
- **Project forecasting:** Streamline project timelines, resources, and budget management.
- **Revenue recognition:** Accurately manage revenue, supporting compliance and transparency.

By linking these modules, Platned provides real-time insights that empower decision-makers with the data necessary for strategic planning.

Global business plan management

For businesses operating internationally, Platned's solution addresses diverse market needs:

- Supports multiple currencies and local regulatory requirements for seamless global operations.
- Standardises processes across regions, consolidating financial and operational data in line with global standards.

Consolidated business planning

Our solution enables organisations to consolidate individual project plans into a single, cohesive business strategy. This helps organisations:

- Achieve greater visibility across projects.
- Enhance collaboration across departments.
- Simplify data aggregation to support informed decision-making at every level.

Advanced Data Handling with IFS Business Reporter

Platned has developed an advanced solution using IFS Business Reporter, designed to meet the unique data handling needs of construction businesses:

- **Complex Data Management:** Seamlessly manage large volumes of business planning data, ensuring accuracy and consistency across all plans.
- **Editable Forecasts:** Empower users to adjust forecasts based on changing project demands, with the ability to write back edited data directly into the IFS system. This feature ensures data integrity and enables real-time forecasting adjustments.

Key Benefits

- **Enhanced decision-making:** Access to real-time, consolidated data across modules supports informed business planning and timely adjustments.
- **Operational efficiency:** Automate and standardise processes, reducing manual errors and saving time.
- **Scalable for growth:** Adaptable to support businesses as they expand operations globally, ensuring sustained success.

Our construction business planning solution provides construction companies with the essential tools to manage, consolidate, and forecast with accuracy and efficiency. With Platned's industry-specific expertise and integration of IFS technologies, construction businesses can confidently drive growth and deliver on complex projects.
