

Platned Acumatica FastTrack

What is Acumatica FastTrack?

Acumatica FastTrack is a streamlined deployment process designed for rapid implementation, ensuring high quality and cost-effectiveness. It focuses on delivering immediate value with minimal complexity, making it ideal for small and midsize companies with straightforward business processes. The process is built on predefined configurations, with clients leading the implementation effort after receiving minimal but essential training.

The deployment scope is intentionally simplified, supporting single-entity operations without customisations, integrations, or add-ons. This standardised approach relies on Acumatica's in-the-box (ITB) functionality to deliver a rapid and reliable solution.

Why choose Acumatica FastTrack?

The FastTrack approach is designed to deliver faster time-to-productivity (TTP) and reduce time-to-value (TTV), enabling organisations to see benefits sooner. It offers lower entry costs, maximising return on investment (ROI) while ensuring high-quality outcomes with minimal risks. This streamlined process prioritises efficiency and customer satisfaction, helping businesses achieve operational readiness quickly and confidently.

Deployment process

Acumatica FastTrack follows a structured five-phase methodology. It begins with initiation, where project scope and objectives are clearly defined, and moves into planning and monitoring to establish a strategic approach. During adaptation, detailed requirements are analysed, and the solution is tailored to the client's needs. The deployment phase involves implementing preconfigured business content to ensure a smooth go-live experience. Finally, the sustain phase supports ongoing operations and allows for scalability as businesses grow.

Deployment is typically completed in 8-12 weeks, making it an excellent choice for companies seeking rapid results. The solution can also be expanded in a phased manner post-implementation, allowing clients to add functionalities and enhancements during Phase 2.

Modules and timeframes

Acumatica FastTrack supports three targeted modules with varying timelines. General business (financials only) can be deployed within 50-60 days, while the distribution edition (financials and distribution) requires 60-75 days. For more complex needs, the construction edition (financials, purchasing, and job costing) is implemented over 75-90 days.

Data migration and statement of work

Data migration is a critical part of the deployment process. Clients take the lead on migrating master, transactional, and historical data, supported by comprehensive training and guidelines from Platned. The Statement of Work (SOW) clearly outlines what is included in the deployment scope, ensuring transparency and managing expectations. Items outside the initial scope are addressed either during a second phase post-Go Live or through a formal change control process.

Why Platned?

With Platned's expertise, the Acumatica FastTrack deployment becomes a seamless and efficient experience. This approach helps businesses simplify their digital transformation journey, enabling them to save time, reduce costs, and achieve their goals with a scalable, future-proof solution.
