

IFS Cloud™ – Construction module

Overview

The IFS Cloud construction module enables organisations to manage complex projects, assets, and contracts across the entire construction lifecycle. From design and engineering through to execution, commissioning, and maintenance, IFS provides a unified platform that improves efficiency, profitability, and compliance.

Key features

- **Project and contract management** – integrated tools for planning, execution, and monitoring with real-time cost control
- **Resource and workforce planning** – optimise labour, subcontractors, and equipment allocation across multiple projects
- **Document management** – centralised control of drawings, specifications, and compliance documentation
- **Cost and revenue control** – track budgets, change orders, and billing with complete visibility
- **Asset lifecycle management** – manage construction assets from procurement through operation and maintenance
- **Mobile and field capabilities** – real-time updates from site for progress tracking, safety reporting, and quality checks

Benefits

- Improve project profitability with accurate forecasting, budgeting, and billing
- Reduce delays by optimising workforce, subcontractor, and equipment utilisation
- Enhance compliance through centralised project documentation and quality assurance
- Streamline collaboration across stakeholders with integrated workflows and mobile access
- Increase visibility across the project portfolio with real-time dashboards
- Support business growth with a scalable platform for multi-project, multi-site, and international operations

Why IFS?

IFS is a recognised leader in project and asset-based ERP. Trusted by global construction firms such as Clancy Docwra, Berkeley Group, and NCC, IFS delivers functionality for project management, contract control, and field service. With IFS, construction companies can deliver projects on time, on budget, and to the highest quality standards.

Why Platned?

Platned is an IFS Gold Services Partner with extensive experience in delivering ERP transformation for construction and engineering organisations. Our expertise spans the full project lifecycle – from business case and solution design to implementation, hosting, and 24/7 support. We align technology with your people and processes to deliver measurable outcomes. As trusted advisors, we focus on building long-term partnerships that deliver sustained business value.

Selected construction customers

Clancy Docwra – Leading UK utilities and construction service provider using IFS for project management, work order control, and asset maintenance

Berkeley Group – Major UK residential property developer leveraging IFS to manage projects, contracts, and financials with full visibility
