

# IFS Cloud™ Modules Factsheet

Delivered by Platned

IFS Cloud™ is a composable enterprise platform that unifies finance, people, assets, supply chains, and services on a single data model. With embedded AI, automation, and open APIs, it enables organisations to adopt the functionality they need today and expand as they grow. Platned delivers IFS Cloud™ with industry expertise, ensuring customers gain maximum value without the complexity of bolt-on systems.

## Finance and People

Strong finance and workforce management are essential for business resilience. IFS Cloud™ provides complete financial control alongside human capital management.

- Multi-ledger accounting, cash planning, budgeting, and consolidation
- Accounts payable and receivable, e-invoicing, and fixed assets
- Recruitment, onboarding, training, and employee development
- Time and attendance, payroll integration, and expense management
- Health & safety oversight and self-service HR tools

## Customers and Commerce

IFS Cloud™ gives you a complete view of your customers, from first engagement to long-term loyalty. Marketing, sales, and service teams work with the same data, improving collaboration and responsiveness.

- Lead and opportunity management with full contact history
- Campaign automation and customer journey management
- Omnichannel contact centre and proactive engagement tools
- Case and call management for faster resolution
- Trade agreements, catalogue management, and storefront integration

## Procurement and Supply Chain

Procurement and supply chain modules connect strategy with execution. Organisations can manage supplier relationships while ensuring materials and goods flow smoothly through the business.

- Strategic sourcing, supplier management, and contract control
- Supplier self-service portals for collaboration
- Demand forecasting and sales & operations planning
- Inventory, warehouse, and shipment management
- Rental management for equipment and assets

## Manufacturing and Projects

Manufacturing modules support multiple production models, from discrete to batch, repetitive, and project-based. For project-driven organisations, IFS Cloud™ offers integrated tools for planning, delivery, and control.

- Material & resource planning and visual scheduling
- Discrete, batch, repetitive, and configure-to-order production
- Quality management, MES, and circular operations
- Project initiation, scheduling, and resource allocation
- Contract management, project financials, and risk control

## Service and Asset Management

IFS Cloud™ helps organisations deliver reliable service while maximising the value of their assets. Service management focuses on customer satisfaction, while asset management ensures operational continuity.

- Service order management, contracts, and warranties
- Scheduling, dispatch, and mobile workforce productivity
- Service logistics and customer self-service portals
- Preventive, predictive, and condition-based maintenance
- Asset planning, performance management, and GIS integration

## Aviation Maintenance

For aviation and defence, IFS Cloud™ offers industry-specific functionality covering airframe, line, depot, and component maintenance, as well as technical content management, fleet management, and aviation compliance.

- Complex assembly, airframe, line, depot, and component MRO
- Technical content and documentation management
- Fleet management and aviation materials support
- Compliance with aviation reliability and quality standards

## Sustainability and Innovation

Sustainability is embedded throughout IFS Cloud™, helping organisations measure and reduce their environmental impact. Every module is also enhanced by embedded innovation such as AI, machine learning, and automation.

- ESG reporting and emissions tracking
- Energy monitoring, circular operations, and logistics optimisation
- IFS.ai Copilot for contextual AI support
- Workflow automation and IoT integration
- Remote Assistance and role-based dashboards

## Platform and Benefits

All modules share the same intuitive interface and open architecture. Deployment is flexible, and twice-yearly feature releases ensure you remain up to date.

- Open APIs and low-code/no-code tools for easy extension
- Consistent user experience across devices
- Cloud-hosted or self-managed deployment options
- Twice-yearly feature releases and monthly security patches
- Start with what you need and expand at your own pace

With Platned as your IFS Gold Partner, you gain more than software. You gain expert guidance, flexible support, and complementary solutions such as Mahara (automated testing), ParsaAI (finance automation), Boomi (integration), and Platned Gateway (on-demand expertise) to unlock the full potential of IFS Cloud™.
